

ACTIVITY 1

WATCH THIS VIDEO-TUTORIAL AND DESCRIBE HOW TO INSTALL A HARD DISK.

First of all, we have to **power off** the computer and unplug it.

Open the case by removing any screws and sliding off the side panel.

Identify an **empty drive bay** inside your computer and locate the hard disk mounting screws.

Place the hard disk into the drive bay and secure it using the mounting screws.

Connect the hard disk to your motherboard using a **data cable**. The data cable should be a **SATA cable** and the connector should be a SATA port on the motherboard. (Depending on your specific computer and hard disk). Its always a good idea to consult the computer and hard disk documentation for specific instructions and compatibilities.

Connect the hard disk to a power source using a **power cable**. The power cable should be a **Molex connector** and the connector should be a **Molex port** on the power supply.

Close the case of your computer and **plug it back in**.

Power on your computer and **enter the BIOS** or UEFI settings.

In the BIOS or UEFI settings, **set the hard disk as the primary boot device**.

Save your changes and exit the BIOS or UEFI settings.

Your computer should now boot from the hard disk.
